**Investigating Human Error: Incidents, Accidents and Complex Systems** Nov 26 2020 This title was first published in 2002: This volume presents a method to investigate the human performance issues associated with an accident or incident, with a detailed discussion of the types of data to collect, and methods of collecting and analyzing data. The book should be of interest to accident/incident investigators, specialists in nuclear, chemical processing, aviation and other critical industries, safety experts, researchers and students in the field of human error, human factors, ergonomics and industrial engineering, and government agencies for regulation, health and safety.

Advances in Condition Monitoring of Machinery in Non-Stationary Operations Apr 19 2020 The book provides readers with a snapshot of recent research and technological trends in the field of condition monitoring of machinery working under a broad range of operating conditions. Each chapter, accepted

after a rigorous peer-review process, reports on an original piece of work presented and discussed at the 4th International Conference on Condition Monitoring of Machinery in Non-stationary Operations, CMMNO 2014, held on December 15-16, 2014, in Lyon, France. The contributions have been grouped into three different sections according to the main subfield (signal processing, data mining or condition monitoring techniques) they are related to. The book includes both theoretical developments as well as a number of industrial case studies, in different areas including, but not limited to: noise and vibration; vibro-acoustic diagnosis; signal processing techniques; diagnostic data analysis; instantaneous speed identification; monitoring and diagnostic systems; and dynamic and fault modeling. This book not only provides a valuable resource for both academics and professionals in the field of condition monitoring, it also aims at facilitating communication and collaboration between the two groups.

*Schlieren and Shadowgraph Techniques* Mar 19 2020 Schlieren and shadowgraph techniques are basic and valuable tools in various scientific and engineering disciplines. They allow us to see the invisible: the optical inhomogeneities in transparent media like air, water, and glass that otherwise cause only ghostly distortions of our normal vision. These techniques are discussed briefly in many books and papers, but there is no up-to-date complete treatment of the subject before now. The book is intended as a practical guide for those who want to use these methods, as well as a resource for a broad range of disciplines where scientific visualization is important. The colorful 400-year history of these methods is covered in an extensive introductory chapter accessible to all readers.

*Human Factors Engineering and Ergonomics* Jan 29 2021 Although still true to its original focus on the person-machine interface, the field of human factors psychology (ergonomics) has expanded to include stress research, accident analysis and prevention, and nonlinear dynamical systems theory (how systems change over time), human group dynamics, and environmental psychology. Reflecting new developments in the field, *Human Factors Engineering and Ergonomics: A Systems Approach*,

Second Edition addresses a wide range of human factors and ergonomics principles found in conventional and twenty-first century technologies and environments. Based on the author's thirty years of experience, the text emphasizes fundamental concepts, systems thinking, the changing nature of the person-machine interface, and the dynamics of systems as they change over time. See What's New in the Second Edition: Developments in working memory, degrees of freedom in cognitive processes, subjective workload, decision-making, and situation awareness Updated information on cognitive workload and fatigue Additional principles for HFE, networks, multiple person-machine systems, and human-robot swarms Accident analysis and prevention includes resilience, new developments in safety climate, and an update to the inventory of accident prevention techniques and their relative effectiveness Problems in "big data" mining Psychomotor control and its relevance to human-robot systems Navigation in real-world environment Trust in automation and augmented cognition Computer technology permeates every aspect of the human-machine system, and has only become more ubiquitous since the previous edition. The systems are becoming more complex, so it should stand to reason that theories need to evolve to cope with the new sources of complexity. While many books cover traditional topics and theory, they do not focus on the practical problems students will face in the future. With broad coverage that ranges from physical ergonomics to cognitive aspects of human-machine interaction and includes dynamic approaches to system failure, this book increases the number of methods and analytical tools that are available for the human factors researcher.

The End of the Novel of Love Aug 24 2020 A finalist for the National Book Critics Circle Award for Criticism, Vivian Gornick's *The End of the Novel of Love* explores the meaning of love and marriage as literary themes in the twentieth century. In *The End of the Novel of Love*, an acclaimed and provocative collection of criticism, Gornick applies the same intelligence, honesty, and insight that

define her memoirs to an analysis of love and marriage as literary themes in the twentieth century. She examines the work and lives of several authors she admires—including Grace Paley, Willa Cather, Jean Rhys, George Meredith, Jane Smiley, Richard Ford, and Andre Dubus—to ultimately posit that love, sexual fulfillment, and marriage are now exhausted as the metaphorical expressions of success and happiness. Spanning the depths of common experience and the expanse of twentieth century literature, Gornick crafts an argument that is as defined by discourse as it is by the power of her language, which is gracefully poised between objective knowledge and subjective experience. In these eleven essays, she comes to see that, for most writers, like most readers, it is the drama of our angry and frightened selves in the presence of love that is our modern preoccupation. *The End of the Novel of Love* is a strikingly original and thought-provoking collection from a canonical critic.
