Scientific Essay from the year 2006 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 10 von 10 (Schweiz), University of Lugano (Faculty of Communication Sciences and Faculty of Economics), 34 entries in the bibliography, language: English, abstract: Starting situation Today, many markets have reached such a degree of saturation that market potential is often virtually exhausted. Increasingly, growth can be achieved only at the expense of competitors. Increasing internationalization and the market entry by new competitors result in brand and product inflation. Dramatically shorter product life cycles and constantly accelerating product aging are another challenge for companies that they must deal with.² Hence, in order to make a company's products stand out from the diverse range available, suppliers are attempting to hone competitive edge through increasing differentiation of their brands, emphasizing how they meet the specific needs and wants of their target customer groups and market segments. The overall goal of this approach is to build up brands that are unique in the market place - brands that promise a unique value. A strong brand can reach high rates of loyalty among existing customers; it can "more easily" gain new customers, due to its characteristic position; and it can therefore charge a premium price. Marketers have several means

to work with in order to reach this goal. Generally, the corporate strategy "might specify a premium position or a massmerchandiser/ discount approach. These obviously have direct impact on the pricing"³. Price is only one of the marketing variables, but for the case of premium brands it is important. The pricing position is one determinant for the development of a brand identity, incidentally, not only among customers and potential customers, but also among society, employees, etc.). As part of the company's target market and positioning objectives (that large This unique sketchbook is for you to sketch down your heart and soul. There is no date inside this sketchbook. Business Valuation Discounts and Premiums There is often more money in dispute in determining the discounts and premiums in a business valuation than in arriving at the pre-discount valuation itself. Discounts and premiums affect not only the value of the company but also play a crucial role in determining the risk involved, control issues, marketability, contingent liability, and a host of other factors that can make or break a deal. It is essential that every appraiser know when discounts and premiums apply and how to quantify them. Shannon Pratt's Business Valuation Discounts and Premiums compiles all the key information you need to successfully and accurately determine discounts and premiums in business valuations. It explores the three areas of discounts and premiums-income valuation, market valuation, and the asset approach-explaining how different discounts or premiums may be applicable, depending on the basic

valuation approach used, and how each approach can affect the outcome. Filled with many never-before-published studies, the comprehensive coverage includes: * Strategic acquisitions * Extensive empirical data * Pre-IPO marketability discount studies * Merger and acquisition negotiations, empirical evidence from completed transactions, and positions taken by courts in litigation * Strategic acquisitions on premiums * Studies on minority discounts, available for the first time

Written by a recognized authority on business valuation, this book will help you master the complex issues and exploit the numerous uses for premiums and discounts to their utmost. www.wiley.com

We examine (i) how value premiums vary with firm size, (ii) whether the CAPM explains value premiums, and (iii) whether in general average returns compensate beta in the way predicted by the CAPM. Loughran's (1997) evidence for a weak value premium among large firms is special to 1963-1995, U.S. stocks, and the book-to-market value-growth indicator. Ang and Chen's (2003) evidence that the CAPM can explain U.S. value premiums is special to 1926-1963. The CAPM's general problem is that variation in unrelated to size and value-growth goes unrewarded throughout 1926-2004. This produces rejections of the model for 1926-1963 and 1963-2004.

With cross-section data from 53 emerging and mature markets, we provide evidence that equity premium puzzle is a global phenomenon. In addition to risk aversion, equity premium may reflect ambiguity aversion. We explore the sources of equity premium using some pertinent fundamental independent variables, as well as the World Bank institutional quality indexes and other proxies for the degree of ambiguity in the sample countries. Some World Bank and other indexes are statistically significant, which indicates that a large part of equity premium may reflect investor aversion to ambiguities resulting from institutional weaknesses. In a world of stiffening competition, business strategy is more crucial than ever. Yet most organizations struggle in this area--not with formulating strategy but with executing it, or putting their strategy into action. Owing to execution failures, companies realize just a fraction of the financial performance promised in their strategic plans. It doesn't have to be that way, maintain Robert Kaplan and David Norton in The Execution Premium. Building on their breakthrough works on strategy-focused organizations, the authors describe a multistage system that enables you to gain measurable benefits from your carefully formulated business strategy. This book shows you how to: Develop an effective strategy--with tools such as SWOT analysis, vision formulation, and strategic change agendas Plan execution of the strategy--through portfolios of strategic initiatives linked to strategy maps and Balanced Scorecards Put your strategy into action--by integrating operational tools such as process dashboards, rolling forecasts, and activity-based costing Test and update your strategy--using carefully designed management meetings to review operational and strategic data Drawing on extensive research and detailed case studies from a broad array of industries, The Execution Premium presents a systematic and proven framework for achieving the financial results promised by your strategy. We show that, in a monetary equilibrium, trade and asset prices depend on both the supply of the liquidity by the Central Bank and the liquidity of assets and commodities. As a result, monetary aggregates are informative for the conduct of monetary policy. We also show asset prices are higher in liquidity-constrained states of nature. This generates a term premium even in absence of aggregate uncertainty. These results hold in any monetary economy with heterogeneous agents and short-term liquidity effects, where monetary costs act as transaction costs and the quantity theory of money is verified. "The authors re-assesses the view that sovereigns with a history of default are charged only a small and/or short-lived premium on the interest rate warranted by observed fundamentals. Our reassessment uses a metric of such a 'default premium' (DP) that is consistent with asymmetric information models and nests previous metrics, and applies it to a much broader dataset relative to earlier studies. They find a sizeable and persistent DP: in 1870-1938, it averaged 250 bps upon market re-entry, tapering to around 150 bps five years out; in 1970- 2011 the respective estimates are about 400 and 200 bps. They also find that: (i) these estimates are robust to many controls including on actual haircuts; (ii) the DP accounts for as much as 60% of the sovereign spread within five years of market re-entry; (iii) the DP rises with market exclusion spells. These findings help reconnect theory and evidence on why sovereign defaults are infrequent and earlier debt settlements are desirable."--Abstract.
