*The Death of Drawing* Aug 03 2021 The Death of Drawing explores the causes and effects of the epochal shift from drawing to computation as the chief design and communication medium in architecture. Drawing both framed the thinking of architects and organized the design and construction process to place architects at its center. Its displacement by building information modeling (BIM) and computational design recasts both the terms in which architects think and their role in building production. Author David Ross Scheer explains that, whereas drawing allowed architects to represent ideas in form, BIM and computational design simulate experience, making building behavior or performance the primary object of design. The author explores many ways in which this displacement is affecting architecture: the dominance of performance criteria in the evaluation of design decisions; the blurring of the separation of design and construction; the undermining of architects' authority over their projects by automated information sharing; the elimination of the human body as the common foundation of design and experience; the transformation of the meaning of geometry when it is performed by computers; the changing nature of design when it requires computation or is done by a digitally-enabled collaboration. Throughout the book, Scheer examines both the theoretical bases and the practical consequences of these changes. The Death of Drawing is a clear-eyed account of the reasons for and consequences of the displacement of drawing by computational media in architecture. Its aim is to give architects the ability to assess the impact of digital media on their own work and to see both the challenges and opportunities of this historic moment in the history of their discipline.

Through a series of stories, lessons learned the hard way, and a few unfortunate situations, you will find both helpful tips and entertainment from the author's outlook toward spring turkey season as he enlightens upon his journey. Some advice and how to is also provided for turkey calling, setup strategies, camouflage patterns, roasted gobblers, and more. Through memories compiled from traveling across the southeastern and central states of the US, from his hometown in Mississippi, the author seeks to cure an addiction to the outdoor lifestyle, while providing a unique understanding to the heritage, history, and fulfillment found within the swamp bottoms of public land hunting areas. Each individual chapter is a new journey while unfolding how the mind of a turkey hunter processes the spring woods and the perceptions that eventually lead the author to create what is now known as Spring Legion.
