The first three volumes of the Pseudomonas series covered the biology of pseudomonas in a wide context, including the niches they inhabit, the taxonomic relations among members of this group, the molecular biology of gene expression in different niches

and under different environmental conditions, the analysis of virulence traits in plants, animals and human pathogens as well as the determinants that make some strains useful for biotechnological applications and promotion of plant growth. Pseudomonas volume 4 is intended to collect some of the most relevant new emerging issues in the field of Pseudomonas that were not assembled in the three previous volumes. This fourth volume covers the following topics: Virulence and Pathogens Genomics and Proteomics Physiology, Metabolism and Biotechnology. nbsp; Pseudomon

as volume 4 will be of use to researchers working on these bacteria, particularly those studying virulence, genomics, physiology, biotechnology, etc. Advanced students in biology, medicine and agronomy will also find this volume a valuable reference during their studies. The Aldens help to blaze a new trail on Blizzard Mountain where rumors tell of buried treasure. But something strange is going on--supplies go missing, strange noises are heard in the woods, and a member of their group disappears! Agricultural Productivity: Measurement and Sources of Growth addresses measurement issues and techniques in agricultural

productivity analysis, applying those techniques to recently published data sets for American agriculture. The data sets are used to estimate and explain state level productivity and efficiency differences, and to test different approaches to productivity measurement. The rise in agricultural productivity is the single most important source of economic growth in the U.S. farm sector, and the rate of productivity growth is estimated to be higher in agriculture than in the non-farm sector. It is important to understand productivity sources and to measure its growth properly, including the effects of environmental externalities. Both the methods

and the data can be accessed by economists at the state level to conduct analyses for their own states. In a sense, although not explicitly, the book provides a guide to using the productivity data available on the website of the U.S. Department of Agriculture/Economic Research Service. It should be of interest to a broad spectrum of professionals in academia, the government, and the private sector. In this book, leading scholars investigate the difficult ethical, legal, and policy issues that surround egg donation and the new reproductive technologies as a whole. Of special interest are feminist inquiries into

perceptions of women involved in egg donation; the effects of race, ethnicity, and socio-economic status on the uses of such technologies; and moral and theological questions about whether third-party gamete donation should be used at all. In addition, the book describes procedures at four egg-donation centers in the United States, including private for-profit and university-based non-profit programs, and presents a new set of guidelines from the National Advisory Board on Ethics in Reproduction (NABER), a panel in the private sector with members from the fields of ethics, theology, law, medicine, genetics, and public policy.

Rich in detail, shrewdly observed, and vividly narrated, these 6 tales include "Three Deaths," "The Three Hermits," "The Devil," "Father Sergius," "Master and Man," and the title story. Approach your problems from the right end It isn't that they can't see the solution. It is and begin with the answers. Then one day, that they can't see the problem. perhaps you will find the final question. G. K. Chesterton. The Scandal of Father 'The Hermit Clad in Crane Feathers' in R. Brown 'The point"of a Pin'. van Gulik's The Chinese Maze Murders. Growing specialization and diversification have brought a host of monographs and textbooks on increasingly

specialized topics. However, the "tree" of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, coding theory and the structure of water meet one another in packing and

covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. And in addition to this there are such new emerging subdisciplines as "experimental mathematics", "CFD", "completely integrable systems", "chaos, synergetics and large-scale order", which are almost impossible to fit into the existing classification schemes. They draw upon widely different sections of mathematics. Understanding radionuclide behaviour in the natural environment is essential to the sustainable

development of the nuclear industry and key to assessing potential environmental risks reliably. Minimising those risks is essential to enhancing public confidence in nuclear technology. Scientific knowledge in this field has developed greatly over the last decade. Radionuclide behaviour in the natural environment provides a comprehensive overview of the key processes and parameters affecting radionuclide mobility and migration. After an introductory chapter, part one explores radionuclide chemistry in the natural environment, including aquatic chemistry and the impact of natural organic matter and

microorganisms. Part two discusses the migration and radioecological behavior of radionuclides. Topics include hydrogeology, sorption and colloidal reactions as well as in-situ investigations. Principles of modelling coupled geochemical, transport and radioecological properties are also discussed. Part three covers application issues: assessment of radionuclide behaviour in contaminated sites, taking Chernobyl as an example, estimation of radiological exposure to the population, performance assessment considerations related to deep geological repositories, and remediation concepts for contaminated

sites. With its distinguished editors and international team of expert contributors, Radionuclide behaviour in the natural environment is an essential tool for all those interested or involved in nuclear energy, from researchers, designers and industrial operators to environmental scientists. It also provides a comprehensive guide for academics of all levels in this field. radionuclides In this hard-boiled mystery series opener, a former nurse becomes a coroner who winds up investigating her cheating ex-husband for murder. When Mattie Winston catches her husband Dr. David Winston receiving some very special loving care from R.N. Karen Owenby, she quits her job and moves out. Mattie's best friend Izzy offers her a place to stay and suggests she'd be a natural as deputy coroner. Now, instead of taking patients' pulses, Mattie's weighing their hearts and livers. But Mattie's first homicide call turns out to be for none other than Nurse Karen, and even though she saw her ex in a heated

argument with the newly deceased the night before, she refuses to believe David could be a killer. Keeping mum about what she saw, Mattie is also left speechless by the sight of hunky Detective Steve Hurley . . . From learning the ropes on her new job to sorting out her feelings about her ex and dealing with her growing attraction to Detective Hurley, Mattie's in deep water and in danger of sinking quickly, especially when she places herself dead center in the path of a desperate—yet determined—killer . . . “The forensic details will interest Patricia Cornwell readers . . . while the often slapstick humor and the blossoming romance between Mattie and Hurley will draw Evanovich fans.”—Booklist 'The Family Communication Sourcebook' provides an in-depth examination of contemporary theory and research in the area of family communication. It frames current research practices and approaches with a historical overview of how the field developed. The acclaimed and captivating true story of two restless society girls who left their affluent lives to “rough it”

as teachers in the wilds of Colorado in 1916. In the summer of 1916, Dorothy Woodruff and Rosamond Underwood, bored by society luncheons, charity work, and the effete men who courted them, left their families in Auburn, New York, to teach school in the wilds of northwestern Colorado. They lived with a family of homesteaders in the Elkhead Mountains and rode to school on horseback, often in blinding blizzards. Their students walked or skied, in tattered clothes and shoes tied together with string. The young cattle rancher who had lured them west, Ferry Carpenter, had promised them the adventure

of a lifetime. He hadn't let on that they would be considered dazzling prospective brides for the locals. Nearly a hundred years later, Dorothy Wickenden, the granddaughter of Dorothy Woodruff, found the teachers' buoyant letters home, which captured the voices of the pioneer women, the children, and other unforgettable people the women got to know. In reconstructing their journey, Wickenden has created an exhilarating saga about two intrepid women and the “settling up” of the West. Papers presented at a seminar organized by the Department of Sri Guru Granth Sahib Studies, Punjabi University, Patiala. Engineering Electromagnetics

provides a solid foundation in electromagnetics fundamentals by emphasizing physical understanding and practical applications. Electromagnetics, with its requirements for abstract thinking, can prove challenging for students. The authors' physical and intuitive approach has produced a book that will inspire enthusiasm and interest for the material. Benefiting from a review of electromagnetic curricula at several schools and repeated use in classroom settings, this text presents material in a rigorous yet readable manner. FEATURES/BENEFITS Starts with coverage of transmission lines before addressing fundamental laws, providing a

smooth transition from circuits to electromagnetics. Emphasizes physical understanding and the experimental bases of fundamental laws. Offers detailed examples and numerous practical end-of-chapter problems, with each problem's topical content clearly identified. Provides historical notes, abbreviated biographies, and hundreds of footnotes to motivate interest and enhance understanding. The Annual Review of Jazz Studies (ARJS) is a journal providing a forum for the ever expanding range and depth of

jazz scholarship, from technical analyses to oral history to cultural interpretation. Addressed to specialists and fans alike, all volumes include feature articles, book reviews, and unpublished photographs. This 14th issue contains four intriguing articles that to some degree contravene accepted precepts of jazz orthodoxy. John Howland traces the connection between Duke Ellington's extended works and the "symphonic jazz" model of the 1920s as exemplified by Paul Whiteman and his chief arranger, Ferde Grof . Horace J. Maxile Jr. takes an unfashionably broad perspective of Charles Mingus's "Ecclusiastics,"

applying recent developments in cultural theory as well as the formal tools of traditional music theory. Brian Priestley's exploration of the ties between Charlie Parker and popular music challenges the canonical depiction of Parker as a lone revolutionary genius, instead underscoring the saxophonist's ties to the popular music of his time. Finally, John Wriggle presents an extensive examination of the life and work of arranger Chappie Willet, an unsung hero of the Swing Era. The book reviews cover a cross-section of the burgeoning jazz literature, and Vincent Pelote has again compiled a list of books received at the Institute of Jazz

Studies. Gas Reservoir Engineering provides the undergraduate as well as the graduate student with an introduction to fundamental problem solving in gas reservoir engineering through practical equations and methods. Although much oil well technology applies to gas wells, many differences exist. This book helps students understand and recognize these differences to enable appropriate handling of gas reservoir problems. Natural gas production has become increasingly important in the U.S., and the wellhead revenue generated from it is now greater than the wellhead revenue generated from oil

production. Because this trend eventually will be followed worldwide, we feel that it is important to emphasize gas reservoir engineering courses at the undergraduate level and to have a textbook devoted to this purpose. This book also serves as an introduction to gas reservoir engineering for graduate students and practicing petroleum engineers. Although much of the technology for oil wells applies to gas wells, there are still many differences. It is important to learn these differences and to have a good, fundamental background in how to recognize and handle them. We have tried to provide practical equations and

methods while emphasizing the fundamentals on which they are based. We have not attempted to be complete in the sense of presenting the best-known solution(s) to all problems in this area of technology. In many cases, we didn't even present the problem, much less a solution. Instead, we concentrated on fundamentals and hope to have made the literature in gas reservoir engineering more accessible both now and in the future. If you don't find your favorite topic in the table of contents or in the index, it simply didn't make our short list of fundamentals that we believed to be key parts of the literature. In recent years, the

critical role of microRNAs has been revealed within the biology of cells that constitute the immune system. In *MicroRNAs and the Immune System: Methods and Protocols*, expert researchers explore the latest techniques for studying miRNA expression, including the most up-to-date data on splinted ligation and qRT-PCR assays, as well as high-throughput profiling through cloning, deep sequencing, and microarrays. Chapters outline methods to study miRNA functions in various cell types from a single cell type level to entire model organisms, and present studies of miRNAs in the context of viruses and the immune

response. Tools are also provided to help navigate bioinformatics databases on miRNAs and their targets. Composed in the highly successful *Methods in Molecular Biology*™ series format, each chapter contains a brief introduction, step-by-step methods, a list of necessary materials, and a Notes section which shares tips on troubleshooting and avoiding known pitfalls. Contemporary and innovative, *MicroRNAs and the Immune System: Methods and Protocols* is an essential handbook for immunologists, biochemists, and molecular biologists. Baltimore has a long, colorful history that traditionally has been focused

on famous men, social elites, and patriotic events. The Baltimore Book is both a history of "the other Baltimore" and a tour guide to places in the city that are important to labor, African American, and women's history. The book grew out of a popular local bus tour conducted by public historians, the People's History Tour of Baltimore, that began in 1982. This book records and adds sites to that tour; provides maps, photographs, and contemporary documents; and includes interviews with some of the uncelebrated people whose experiences as Baltimoreans reflect more about the city than Francis Scott Key ever did. The tour

begins at the B&O Railroad Station at Camden Yards, site of the railroad strike of 1877, moves on to Hampden-Woodbury, the mid-19th century cotton textile industry's company town, and stops on the way to visit Evergreen House and to hear the narratives of ex-slaves. We travel to Old West Baltimore, the late 19th-century center of commerce and culture for the African American community; Fells Point; Sparrows Point; the suburbs; Federal Hill; and Baltimore's "renaissance" at Harborplace. Interviews with community activists, civil rights workers, Catholic Workers, and labor union organizers bring color and passion to this

historical tour. Specific labor struggles, class and race relations, and the contributions of women to Baltimore's development are emphasized at each stop. Author note: Elizabeth Fee is Professor in the Department of Health Policy and Management of The Johns Hopkins University School of Hygiene and Public Health. Linda Shopes is Associate Historian at the Pennsylvania Historical and Museum Commission. Linda Zeidman is Professor of History and Economics at Essex Community College. The German land of Hesse (Bundesland Hessen) is well known for its excellent wines (Rheinhessen), for its financial

centre and for its airport (Frankfurt/Main). It is, unjustifiably, far less well known for its importance to thennoregulation. Within the small area of Bad Nauheim, Giessen and Marburg (in alphabetical order) a greater concentration of students of thenno regulation has been trained or worked or is working than probably in any other single area of Europe, if not the world. It is thus most appropriate to hold the Ninth International Symposium on the Pharmacology of Thennoregulation in Giessen, from August 7 to 12, 1994. The community of students of thennoregulation was extremely grateful that

Professor Kurt Bruck and the lustus-Liebig-University of Giessen had extended this invitation. The same community was even more saddened that Kurt Bruck died on April 27, 1992 and thus could not participate in this event that had been planned to honour his achievements. As a small token of friendship and affection, the many friends of Kurt Bruck from all over the world who will participate in this event dedicate this symposium to the memory of Kurt Bruck. Another staunch friend, researcher of temperature regulation and supporter of this series of symposia died in October 1993: Professor Wilhelm Siegmund

Feldberg. We feel fortunate to be able to start this volume with two brief infonnal and personal accounts of professors Bruck and Feldberg. Many Members of Congress have become increasingly concerned about what can be done to address student bullying. Congressional interest is in response to high-profile incidents of bullying and their negative consequences, as well as to an increasing body of research documenting the detrimental effects of school bullying. This book begins with working definitions of bullying and cyber-bullying that were developed by a federal interagency working group. It provides a brief overview of

research on the prevalence and impact of bullying, and it reviews research on what can be done to reduce student bullying. The authors continue to discuss the federal and state laws providing protection of children from cyberstalking, cyberharassment, and cyberbullying and end the book focusing on the White House conference on bullying prevention. Sunrise with Sea Monsters is Paul Theroux's immensely entertaining collection of his shorter writings, ranging from sketches to critical essays. Each piece marks a new 'confrontation with the world' and throws new light on the political and social climate of diverse cultures such as those of New York, Singapore, Ireland and Malawi. Others give a lively portrayal of the people Theroux has met or books and landscapes which have inspired him. Above all, this is a fascinating perspective on two decades of travelling, writing and living away from home. A thrilling historical epic with an unlikely teenage hero Who says fate is written in the

stars? Set in sixteenth-century Europe, JEPP is the thrilling, romantic and in turns heart-warming and poignant story of a teenage dwarf limited not only by his height but by his destiny. Although he appears to be bound for a lowly life as a court dwarf, Jepp has ambition, and he dreams of becoming a scientist and marrying the woman he loves. This highly original and unforgettable story is based on a real historical figure, and Jepp's story includes violence, love, astrology, astronomy, and even a beer-drinking moose. A Philippa Gregory for teens, JEPP is ideal for fans of adventurous, thought-provoking historical romance.
