The Globalization Paradox Nov 26 2020 For a century, economists have driven forward the cause of globalization in financial institutions, labour markets, and trade. Yet there have been consistent warning signs that a global economy and free trade might not always be advantageous. Where are the pressure points? What could be done about them? Dani Rodrik examines the back-story from its seventeenth-century origins through the milestones of the gold standard, the Bretton Woods Agreement, and the Washington Consensus, to the present day. Although economic globalization has enabled unprecedented levels of prosperity in advanced countries and has been a boon to hundreds of millions of poor workers in China and elsewhere in Asia, it is a concept that rests on shaky pillars, he contends. Its long-term sustainability is not a given. The heart of Rodrik's argument is a fundamental 'trilemma': that we cannot simultaneously pursue democracy, national self-determination, and economic globalization. Give too much power to governments, and you have protectionism. Give markets too much freedom, and you have an unstable world economy with little social and political support from those it is supposed to help. Rodrik argues for smart globalization, not maximum globalization.

Gender, Development and Globalization Dec 16 2019 *Gender, Development, and Globalization* is the leading primer on global feminist economics and development. Lourdes Benería, a pioneer in the field of feminist economics, is joined in this second edition by Gunseli Berik and Maria Floro to update the text to reflect the major theoretical, empirical, and methodological contributions and global developments in the last decade. Its interdisciplinary investigation remains accessible to a broad audience interested in an analytical treatment of the impact of globalization processes on development and wellbeing in general and on social and gender equality in particular. The revision will continue to provide a wide-ranging discussion of the strategies and policies that hold the most promise in promoting equitable and sustainable development. The authors make the case for feminist economics as a useful framework to address major contemporary global challenges, such as inequalities between the global South and North as well as within single countries; persistent poverty; and increasing vulnerability to financial crises, food crises, and climate change. The authors' approach is grounded in the intellectual current of feminism and human development, drawing on Amartya Sen's capability approach and focused on the importance of the care economy, increasing pressures faced by women, and the failures of neoliberal reforms to bring about sustainable development, reduction in poverty, inequality, and vulnerability to economic crisis.

The Geography of Transport Systems Jul 23 2020 Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of

transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of *The Geography of Transport Systems* has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to further reading and websites. The website can be accessed at: <http://people.hofstra.edu/geotrans> This text is an essential resource for undergraduates studying transport geography, as well as those interest in economic and urban geography, transport planning and engineering.

Globalization and Culture Oct 26 2020 Now in a fully revised and updated edition, this seminal text disputes the view that we are experiencing a "clash of civilizations" as well as the idea that globalization leads to cultural homogenization. Instead, Jan Nederveen Pieterse argues that we are witnessing the formation of a global *mélange* culture through processes of cultural mixing or hybridization. From this perspective on globalization, conflict may be mitigated and identity preserved, albeit transformed. In a new chapter on China, the author focuses on the key issue of agency and power in hybridization, which is important in emerging economies generally, with China a particularly momentous case. Here he draws a key distinction between passive and active forms of globalization (globalized and globalizing) and hybridity (being hybridized and hybridizing). Throughout, the book offers a comprehensive treatment of hybridization arguments, and, in discussing globalization and culture, unbundles the meaning of culture. This historically deep and geographically wide approach to globalization is essential reading as we face the increasing spread of conflicts bred by cultural misunderstanding.

In the fourth edition, noted historian Peter N. Stearns continues his global analysis of the industrial revolution with new discussions of
