Web Aug 15 2019: The configuration or topology of a network is key to determining its performance. Network topology is the way a network is arranged including the physical or logical description of how links and nodes are set up to relate to each other. There are numerous ways a network can be arranged all with different pros and cons.

This is the softcover reprint of the English translation of 1971 available from Springer since 1989 of the first 4 chapters of Bourbaki's *Topologie Générale*. It gives all the basics of the subject starting from definitions. Important classes of topological spaces are studied. Uniform structures are introduced and applied to topological groups.

Let U_1, U_2 be two subsets of X . First for each $x \in U_1 \cap U_2$ there are $B_1, B_2 \in \mathcal{B}$ such that $x \in B_1 \subseteq U_1$ and $x \in B_2 \subseteq U_2$. This is because $U_1 \cap U_2 \in \mathcal{B}$ and $x \in U_1 \cap U_2$. By B_2 there is $B_3 \in \mathcal{B}$ such that $x \in B_3 \subseteq B_1 \cap B_2$. Now we found $B_3 \in \mathcal{B}$ such that $x \in B_3 \subseteq U_1 \cap U_2$. We can generalize the above proof to n subsets but let's use induction to prove it.
