Humanity is under threat, but all is not lost. We can take action! But how? Sustainable IT Playbook for Technology Leaders will show you how. It will walk you through the construction and implementation of a sustainable IT strategy and enable you to do your bit for the future of mankind. The book is split into three parts. Part I details the "why" and the clear and present danger that humanity faces today: the climate crisis. How did we get here, what are the immediate threats, what are the planetary boundaries that we need to peel back to safe levels, and what impact does IT have on society at large? Part II will focus

on the "what." It examines the nitty-gritty details of what we can do to unlock significant returns on sustainable investments toward a more sustainable future. Part III, the final part of the book, focuses on the "how." How do you turn your ideas into action? What do you need to do to establish your baseline and your direction of travel towards your objective? This part provides tangible case studies and explains how you can start your journey today to begin delivering global and impactful objectives. By the end of this book, you'll be able to plan, implement, and communicate a sustainable IT strategy and set yourself apart as a progressive technology leader. In quantity and importance, private standards are rapidly taking over the role of public norms in the international and national regulation of product safety. This book provides a comprehensive overview of the rise, role and status of these private product safety standards in the legal regulation of integrating markets. In international and regional trade law as in European and American constitutional and administrative law, tort law and antitrust law, the book analyses the ways in which legal systems can and do recognise private norms as 'law.' This sociological question of law's recognition of private governance is indissolubly connected with a normative question of democratic theory: can law recognize legal validity and democratic legitimacy outside the constitution, without constitutional political institutions and beyond the nation state? Or: can law 'constitute' private transnational governance? The book offers the first systematic treatment of European, American and international 'standards law' in the English language, and makes a significant contribution to the study of the processes of globalization and privatization in social and legal theory. For the thesis on which this book was based Harm Schepel was awarded the first EUI Alumni Prize for the "best interdisciplinary and/or comparative thesis on European issues" written at the EUI in recent years. This book examines the historic role of professional and demanding military customers in industrial development. Particular emphasis is paid to public procurement of military equipment as a catalyst for innovation; and the civilian commercialization of military technologies (from gunpowder and cannons to submarines, missiles and aircraft) is documented by many case illustrations that show how macro-level productivity advance has been generated. A complementary volume to *Advancing Public Procurement as Industrial Policy* (2010), which focused on the spillover effects of the Swedish combat aircraft, Gripen, in this book Gunnar Eliasson widens the perspective to cover product development across the Swedish defense industry, with an emphasis on regional economic development and macro-economics, inter alia through the involvement of Saab (aircraft) and Kockums (submarines) in partnership ventures in Australia, Norway and Brazil. The volume is organized into four parts. Part one examines the historical transformation of the Swedish economy over the past three centuries from agriculture and raw materials to an advanced industrial economy. Part two presents detailed case studies to illustrate the spillover effects of procurement projects and military-industrial partnerships. Part three explains the spillover phenomenon theoretically within a dynamic micro- to macro-economic perspective. Particular emphasis is placed on the empirical credibility of model-based economy-wide and dynamic cost-benefit calculations. The book concludes with a section on fostering industrial development through public procurement. The result is a book that will appeal to economists in the industrial economics and management fields; to technical, marketing and purchasing executives in business; and to policy makers in public procurement concerned with innovation and long-run industrial development. Provides values and details on over 12,000 guns manufactured from 1900 to the present. Professional motorsports came to Las Vegas in the mid-1950s at a bankrupt horse track swarmed by gamblers—and soon became enmeshed with the government and organized crime. By 1965, the Vegas racing game moved from makeshift facilities to Stardust International Raceway, constructed with real grandstands, sanitary facilities and air-conditioned timing towers. Stardust would host the biggest racing names of the era—Mario Andretti, Parnelli Jones, John Surtees, Mark Donohue, Bobby Unser, Dan Gurney and Don Garlits among them. Established by a notorious racketeer, the track stood at the confluence of shadowy elements—wiretaps, casino skimming, Howard Hughes, and the beginnings of Watergate. The author traces the Stardust's colorful history through the auto racing monthlies, national newspapers, extensive interviews and the files of the FBI. This collection of essays was written in honour of David Vaver, who recently retired as Professor of Intellectual Property and Information Technology Law and Director of the Oxford Intellectual Property Research Centre at the

University of Oxford. The essays, written by some of the world's leading academics, practitioners and judges in the field of intellectual property law, take as their starting point the common assumption that the patent, copyright and trade mark laws within members of the 'common law family' (Australia, Canada, Israel, Singapore, South Africa, the United Kingdom, the United States, and so on) share some sort of common tradition. The contributors examine, in relation to particular topics, the extent to which such a shared view of the field exists in the face of other forces that are producing divergence. The essays discuss, inter alia, issues concerning court practices, the medical treatment exception, non-obviousness and sufficiency in patent law, originality and exceptions in copyright law, unfair competition law, and cross-border goodwill and dilution in trade mark law. "A playful introduction to Bessie's exciting, triumphant, and unforgettable story." – Kirkus Have you ever been told that you're not enough? That you're not strong enough, tall enough, fast enough? Bessie was told she was not enough. Bessie dreams of riding her bike with the boys after school, but they tell her she is not fast enough. When she finally gets a chance to race, she proves not only that she is fast enough, but she is faster. *Fast Enough* combines an imagined story of Bessie Stringfield as a young girl with historical facts about Bessie as an adult. Bessie Stringfield went on to become the first African-American woman to travel solo across the United States on a motorcycle. Not only was she fast, but she was a true adventurer, daring to ride to places unsafe for African Americans in the 1930s and '40s. *Fast Enough* is an inspirational story for anyone who's been told they are not enough. This book discusses the way that a nature-driven approach to urbanism can be applied at each of the urban scales; architectural design, urban design of neighborhoods, city planning and landscape architecture, and at the city and regional scales. At all levels nature-driven approaches to design and planning add to the quality of the built structure and furthermore to the quality of life experienced by people living in these environments. To include nature and greening to built structures is a good starting point and can add much value. The chapter authors have fiducia in giving nature a fundamental role as an integrated network in city design, or to make nature the entrance point of the design process, and base the design on the needs and qualities of nature itself. The highest existence of nature is a permanent ecosystem which endures stressors and circumstances for a prolonged period. In an urban context this is not always possible and temporality is an interesting concept explored when nature is not a permanent feature. The ecological contribution to the environment, and indirect dispersion of species, from a temporary location will, overall add biodiversity to the entire system.
