This survey of the state of the art on research in early algebra traces the evolution of a relatively new field of research and teaching practice. With its focus on the younger student, aged from about 6 years up to 12 years, this volume reveals the nature of the research that has been carried out in early algebra and how it has shaped the growth of the field. The survey, in presenting examples drawn from the steadily growing research base, highlights both the nature of algebraic thinking and the ways in which this thinking is being developed in the primary and early middle school student. Mathematical relations, patterns, and arithmetical structures lie at the heart of early algebraic activity, with processes such as noticing, conjecturing, generalizing, representing, justifying, and communicating being central to students' engagement. A call for the scattered spiritual-but-not-religious community to join together under a common identity, this book covers all the aspects of the former New Age movement—from its spirituality and philosophy to its art and politics. Exploring the rise and fall of the movement in popular culture, the study examines what spiritual progressives lost when the movement receded and asks them to consider what they could gain personally and collectively by reviving it. This guide encourages solitary spiritual seekers to reach out to one another and create a revitalized New Age community with the power to help everyone grow in their unfinished spiritual evolution. A fascinating look at how the marginal status of Jewish women enabled them to become agents of modernization in nineteenth-century Eastern European Jewish society. Veterinary Clinical Pathology: A Case-Based Approach presents 200 cases with questions for those interested in improving their skills in veterinary clinical pathology. It emphasises an understanding of basic pathophysiologic mechanisms of disease, differential diagnoses and recognition of patterns associated with various diseases or conditions. Topics discussed include haematology, clinical chemistry, endocrinology, acid-base and blood gas analysis, haemostasis, urinalysis, biological variation and quality control. Species covered include the cat, dog and horse, with additional material on ruminants. Cases vary in difficulty, allowing beginners to improve their clinicopathologic skills while more complicated cases, or cases treating unfamiliar topics, are included for experienced readers. This book is a helpful revision aid for those in training as well as for those in practice who are pursuing continuing education. It is also a valuable resource for veterinary nurses and technicians. This

book scrutinizes the current state of evolution education and assesses the recent rise of creationism in Brazil. It provides accounts of classroom-based evolution instruction, teacher preparation programs, educational policies, and school curricula to address challenges faced by biology teachers in the Brazilian educational landscape. *The Evolution of Aesthetic and Expressive Dance in Boston* provides a regional history of the physical education pioneers who established the groundwork for women to participate in movement and expression. Their schools and their writing offer insights into the powerful cultural changes that were reconfiguring women's perceptions of their bodies in motion. The book examines the history from the first successful school of ballroom dance run by Lorenzo Papanti to the establishment of the Braggiotti School by Berthe and Francesca Braggiotti (two wealthy Bostonian socialites who used their power and money to support dance in Boston). The Delsartean ideas about beauty and the expressive capacity of the body freed upper-class women to explore movement beyond social dance and to enjoy movement as artistic self expression. Their interest and pleasure in early "parlor forms" engaged them as sponsors and advocates of expressive dance. Although revolutionaries such as Isadora Duncan and Ruth St. Denis also garnered support from Boston and New York's social sets, in Boston the relationship of the city's elite and its native dancers was both intimate and ongoing. The Braggiotti sisters did not use this support to embark on international tours; instead they founded a school that educated the children of their sponsors and offered performances for their own community. Although later artists, Miriam Winslow and Hans Weiner, did tour nationally and internationally, the intimate relationships they maintained with the upper echelon of Boston society required that they remain sensitive to the needs of their students and their community. Through the study of these schools, the reader is offered a unique perspective on the evolution of expressive dance as it unfolded in Boston and its environs. *The Evolution of Aesthetic and Expressive Dance in Boston* is an important book for those interested in dance history, women's studies, and regional histories. In *Mindful Movement*, exercise physiologist, somatic therapist and advocate Martha Eddy uses original interviews, case studies and practice-led research to define the origins of a new holistic field – somatic movement education and therapy – and its impact on fitness, ecology, politics and performance. The book reveals the role dance has played in informing and inspiring the historical and cultural narrative of somatic arts. Providing an overview of the antecedents and recent advances in somatic study and with contributions by diverse experts, Eddy highlights the role of Asian movement, the European physical culture movement and its relationship to the performing arts and female perspectives in developing somatic movement, somatic dance, social somatics, somatic fitness, somatic dance and spirituality and ecosomatics. *Mindful Movement* unpacks and helps to popularise awareness of both the body and the mind. This book updates the Dual Coding Theory of mind (DCT), a theory of modern human cognition consisting of separate but interconnected nonverbal and verbal systems. Allan Paivio, a leading scholar in cognitive psychology, presents this masterwork as new findings in psychological research on memory, thought, language, and other core areas have flourished, as have pioneering developments in the cognitive neurosciences. *Mind and Its Evolution* provides a thorough exploration into how these adaptive nonverbal and verbal systems might have evolved, as well as a careful comparison of DCT with contrasting "single-code" cognitive theories. Divided into four parts, this text begins with a general, systematic theory of modern human cognition as the reference model for interpreting the cognitive abilities of evolutionary ancestors. The first half of the book discusses mind as it is; the second half addresses how it came to be that way. Each half is subdivided into two parts defined by thematic chapters. *Mind and Its Evolution* concludes with evidence-based suggestions about nourishing mental growth through applications of DCT in education, psychotherapy, and health. This volume will appeal to cognitive and evolutionary psychologists, as well as students in the areas of memory, language, cognition, and mind evolution specialists in psychology, philosophy, and other disciplines. For all too many dedicated physicians, stuck in a cycle of seven-minute patient visits and production line healing, medicine has become a frustrating vocation. Furthermore, the current epidemic of chronic illness demands a new care standard that can break down the existing structural barriers to full resolution. It requires functional medicine. *The Evolution of Medicine* provides step-by-step instruction for building a successful "community micropractice," one that engages both the patient and practitioner in a therapeutic partnership focused on the body as a whole rather than isolated symptoms. This invaluable handbook will awaken health professionals to exciting new career possibilities. At the same time, it will alleviate the fear of abandoning a conventional medical system that is bad for doctors, patients, and payers, as well as being ineffectual in the treatment of chronic ailments. Welcome to a new world of modern medical care, delivered in a community setting. It's time to embrace the Evolution of Medicine and reignite your love for the art of healing. 'The personality who received the Christ Being into himself in his thirtieth year is a complex entelechy. Only on the basis of the Akashic Record can an accurate view be gained as to why the life of Jesus is so diversely presented in the various Gospels...' – Rudolf Steiner Previously untranslated, this collection of twelve lectures represents a middle point in Rudolf Steiner's unique exposition of the Christian gospels – his momentous courses on St John and St Luke had already been delivered, whilst his lectures on the Matthew and Mark gospels were yet to follow. Here, he examines the varying depictions of Christ in the gospels, explaining that they represent four different but complementary perspectives. Steiner's unparalleled insights are based on his firsthand ability to research the spiritual Akashic Record – the universal compendium of all events, thoughts, emotions and intentions. The twelve lectures include: 'The Gospels, Buddha and the two Jesus children'; 'Four varying depictions of Christ in the four Gospels'; 'The Mission of the ancient Hebrew people'; 'Preparations for an understanding of the Christ Event'; 'On the right attitude to Anthroposophy'; 'The Gospel of Matthew and the Christ conundrum'; 'Group souls and Individuality'; 'God within and the God in outer manifestation'; 'The Christmas tree as a symbol'; and 'A Christmas mood'. Translated by Christiana Bryan, this volume features an introduction by Tom Ravetz as well as notes and an index. French philosopher's ideas about evolution and the meaning of life and his critique of Plato, Aristotle, and other philosophers through the 19th century. His most famous and influential work. This book analyses social movements and radical political parties' strategies in Spain, Greece, Portugal and Italy from 2008 to today. Events in 2011 such as the Arab Spring and the indignados movement in Spain initiated a new cycle of social protest. This book explores how the economic crisis and policies of austerity have transformed and continue to transform social movements, trade unions and radical political parties in Southern Europe. The economic crisis has led to a rise in protest movements, which confront political institutions and conventional forms of democracy, and develop new spatial and organisational strategies. This book examines these cases, in addition to those groups who, contrastingly, have used institutional politics to achieve their aims, such as new political parties like Podemos in Spain or Movimento 5 Stelle in Italy. Analysing the extent to which there has been a change in approach when it comes to contesting neo-liberal capitalism, this book makes an important contribution to the study of social movements and radical politics. With a comparative perspective and an emphasis on studying the largely unexplored recent social and political dynamics in the European periphery, this book is essential reading for students, scholars and activists interested in social movements, radical politics and European politics more generally. How has human consciousness evolved from its primitive origins, and what course will it take in the future? How should it develop in an individual from infancy and through childhood and the adult years? Such questions have been the focus of many writers and many religious and philosophical traditions, both Eastern and Western. Most writers and traditions conceive of psychic evolution in terms of one universal pattern, and the evolutionary goal considered by a given writer or tradition may be one of rationality, love, or transcendence of one's individual separateness. The author contends that we may conceptualize the goal of psychic evolution in terms of any of five different modes of fulfillment. We can recognize higher and lower levels of attainment in each of these modes. Whatever mode an individual emphasizes, it is easy to recognize a value in having access to other modes. In the author's view, we need to recognize alternative pathways of psychic evolution. The pathways will differ with respect to the modes that are emphasized and the nature of the interplay of different modes. The book begins with familiar designs found all around and inside us (such as the 'trees' of river basins, human lungs, blood and city traffic). It then shows how all flow systems are driven by power from natural engines everywhere, and how they are endlessly shaped because of freedom. Finally, Professor Bejan explains how people, like everything else that moves on earth, are driven by power derived from our "engines" that consume fuel and food, and that our movement dissipates the power completely and changes constantly for greater access, economies of scale, efficiency, innovation and life. Written for wide audiences of all ages, including readers interested in science, patterns in nature, similarity and non-uniformity, history and the future, and those just interested in having fun with ideas, the book shows how many "design change" concepts acquire a solid scientific footing and how they exist with the evolution of nature, society, technology

and science. Illuminates how the Rastafari movement managed to evolve in the face of severe biases Misunderstood, misappropriated, belittled: though the Rastafari feature frequently in media and culture, they have most often been misrepresented, their political and religious significance minimized. But they have not been vanquished. Charles Price's *Rastafari: The Evolution of a People and Their Identity* reclaims the rich history of this relatively new world religion. Charting its humble and rebellious roots in Jamaica's backcountry in the late nineteenth century to the present day, Price explains how Jamaicans' obsession with the Rastafari wavered from campaigns of violence to appeasement and cooptation. Indeed, he argues that the Rastafari as a political, religious, and cultural movement survived the biases and violence they faced through their race consciousness and uncanny ability to ride the waves of anti-colonialism and Black Power. This social movement traveled throughout the Caribbean, Africa, Central America, and the United States, capturing the heart and imagination of much of the African diaspora. Rastafari spans the movement's struggle for autonomy, its multiple campaigns for repatriation to Africa, and its leading role in the Black consciousness movements of the twentieth century. Not satisfied with simply narrating the past, Rastafari also takes on the challenges of gender equality and the commodification of Rastafari culture in the twenty-first century without abandoning its message of equality and empowering the downpressed. Rastafari shows how this cultural and political context helped to shape the development of a Black collective identity, demonstrating how Rastafarians confronted society-wide ridicule and oppression and emerged prouder and more united, steadfast in their conviction that they were a chosen people. Bruno Jasieński was a bilingual Polish-Russian writer who died in exile in Siberia in 1939. This volume traces his literary evolution. The introductory biographical sketch is followed by a discussion of Jasieński's contribution to Polish poetry, specifically the Futurist movement which, like its parallels in Russia and Italy, revolutionized poetic language. An analysis and evaluation of Jasieński's prose work sheds light on the relationship between politics and literature in early twentieth-century Poland and Russia. Most of Jasieński's novels and short stories were written in the approved Soviet tradition of Socialist Realism. His *Man Changes His Skin* is considered one of the best Soviet industrial novels of the 1930s. The author's comprehensive and skillful treatment of Jasieński's literary production, the first to appear in English, also makes a valuable contribution to the knowledge of Futurism in Eastern Europe and Socialist Realism in the Soviet Union. The volume contains numerous quotations from Polish and Russian literature, both in English translation (prepared by the author) and in the original. It will be of interest to students of Slavic literature, comparative literature, and the literature of ideology. "The evolution of the eye spans 3.75 billion years from single cell organisms with eyespots to Metazoa with superb camera style eyes. At least ten different ocular models have evolved independently into myriad optical and physiological masterpieces. The story of the eye reveals evolution's greatest triumph and sweetest gift. This book describes its journey"--Provided by publisher. The concept of evolution is widely considered to be a foundational building block in atheist thought. Leaders of the New Atheist movement have taken Darwin's work and used it to diminish the authority of religious institutions and belief systems. But they have also embraced it as a metaphor for the gradual replacement of religious faith with secular reason. They have posed as harbingers of human progress, claiming the moral high ground, and rejecting with intolerance any message that challenges the hegemony of science and reason. Religion, according to the New Atheists, should be relegated to the Dark Ages of superstition and senseless violence. Yet Darwin did not see evolution as a linear progression to an improved state of being. The more antagonistic members of the New Atheist movement who embrace this idea are not only employing bad history, but also the kind of rigid, black-and-white thinking they excoriate in their religious opponents. Indeed, Stephen LeDrew argues, militant atheists have more in common with religious fundamentalists than they would care to admit, advancing what LeDrew calls secular fundamentalism. In reaction to fundamentalist Christianity and Islamism, this strain of atheism has become an offshoot of the religion it tries so hard to malign. *The Evolution of Atheism* outlines the essential political tension at the heart of the atheist movement. The New Atheism, LeDrew shows, is part of a tradition of atheist thought and activism that promotes individualism and scientific authority, which puts it at odds with atheist groups that are motivated by humanistic ethics and social justice. LeDrew draws on public relations campaigns, publications, podcasts, and in-depth interviews to explore the belief systems, internal logics, and self-contradictions of the people who consider themselves to be atheists. He argues that evolving understandings of what atheism means, and how it should be put into action, are threatening to irrevocably fragment the movement. The evolution of human language has been discussed for centuries from different perspectives. Linguistic theory has proposed grammar as a core part of human language that has to be considered in this context. Recent advances in neurosciences have allowed us to take a new neurobiological look on the similarities and dissimilarities of cognitive capacities and their neural basis across both closely and distantly related species. A couple of decades ago the comparisons were mainly drawn between human and non-human primates, investigating the cytoarchitecture of particular brain areas and their structural connectivity. Moreover, comparative studies were conducted with respect to their ability to process grammars of different complexity. So far the available data suggest that non-human primates are able to learn simple probabilistic grammars, but not hierarchically structured complex grammars. The human brain, which easily learns both grammars, differs from the non-human brain (among others) in how two language-relevant brain regions (Broca's area and superior temporal cortex) are connected structurally. Whether the more dominant dorsal pathway in humans compared to non-human primates is causally related to this behavioral difference is an issue of current debate. Ontogenetic findings suggest at least a correlation between the maturation of the dorsal pathway and the behavior to process syntactically complex structures, although a causal prove is still not available. Thus the neural basis of complex grammar processing in humans remains to be defined. More recently it has been reported that songbirds are also able to distinguish between sound sequences reflecting complex grammar. Interestingly, songbirds learn to sing by imitating adult song in a process not unlike language development in children. Moreover, the neural circuits supporting this behavior in songbirds bear anatomical and functional similarities to those in humans. In adult humans the fiber tract connecting the auditory cortex and motor cortex dorsally is known to be involved in the repetition of spoken language. This pathway is present already at birth and is taken to play a major role during language acquisition. In songbirds, detailed information exist concerning the interaction of auditory, motor and cortical-basal ganglia processing during song learning, and present a rich substrate for comparative studies. The scope of the Research Topic is to bring together contributions of researchers from different fields, who investigate grammar processing in humans, non-human primates and songbirds with the aim to find answers to the question of what constitutes the neurobiological basis of grammar learning. Open questions are: Which brain networks are relevant for grammar learning? Is there more than one dorsal pathway (one from temporal cortex to motor cortex and one to Broca's area) and if so what are their functions? Has the ability to process sequences of a given hierarchical complexity evolved in different phylogenetic lines (birds, primates, other vocal production learners such as bats)? Is the presence of a sensory-to-motor circuit in humans a precondition for development of a dorsal pathway between the temporal cortex and Broca's area? What role do subcortical structures (Basal Ganglia) play in vocal and grammar learning? This 50th anniversary publication provides a comprehensive history of community development. Beginning in 1970 with the advent of the Community Development Society and its journal shortly thereafter, *Community Development*, the editors have placed the chapters in major themed areas or issues pertinent to both research and practice of community development. The evolution of community development as an area of scholarship and application, and the subsequent founding of the discipline, is vital to capture. At the 50-year mark, it is particularly relevant to revisit issues that reoccur throughout the last five decades and look at approaches to addressing them. These include issues and themes around equity and inclusion, collective impact, leadership and policy development, as well as resilience and sustainability. Community change over time has much to teach us, and this set will provide a foundation for fostering understanding of the history of community development and its focus on community change. The chapters in this book were originally published in the journal *Community Development*. Following the Arab Spring, the Muslim Brotherhood achieved a level of influence previously unimaginable. Yet the implications of the Brotherhood's rise and dramatic fall for the future of democratic governance, peace, and stability in the region are disputed and remain open to debate. Drawing on more than one hundred in-depth interviews as well as Arabic-language sources never before accessed by Western researchers, Carrie Rosefsky Wickham traces the evolution of the Muslim Brotherhood in Egypt from its founding in 1928 to the fall of Hosni Mubarak and the watershed elections of 2011-2012. Highlighting elements of movement continuity and change, Wickham demonstrates that shifts in Islamist worldviews, goals, and strategies are not the result of a single strand of cause and effect, and provides a systematic, fine-grained account of Islamist group evolution in

Egypt and the wider Arab world. In a new afterword, Wickham discusses what has happened in Egypt since Muhammad Morsi was ousted and the Muslim Brotherhood fell from power. In *The Body in Motion*, author Theodore Dimon confronts a simple yet crucial task: to make sense of our amazing design. This comprehensive guide demonstrates the functions and evolution of specific body systems, explaining how they cooperate to form an upright, intelligent, tool-making marvel, capable of great technological and artistic achievement. Enhanced with 162 beautifully rendered full-color illustrations, the book opens with an introduction to the origins of movement, leading the reader on a journey through time and evolution—from fish to amphibian, quadruped to primate—showing how humans became the preeminent moving beings on the planet. Delving deeper into our upright support system, *The Body in Motion* clearly describes the workings of the hands and upper limbs; the pelvic girdle; the feet and lower limbs; breathing; the larynx and throat musculature; and more. Central to the book is the idea that it is our upright posture that makes it possible for us to move in an infinite variety of ways, to manipulate objects, to form speech, and to perform the complex rotational movements that underlie many of our most sophisticated skills. These systems, Dimon argues persuasively, have helped us build, invent, create art, explore the world, and imbue life with a contemplative, spiritual dimension that would otherwise not exist. A fascinating history of the international human rights movement as seen by one of its founders. During the past several decades, the international human rights movement has had a crucial hand in the struggle against totalitarian regimes, cruelties in wars, and crimes against humanity. Today, it grapples with the war against terror and subsequent abuses of government power. In *The International Human Rights Movement*, Aryeh Neier—a leading figure and a founder of the contemporary movement—offers a comprehensive and authoritative account of this global force, from its beginnings in the seventeenth and eighteenth centuries to its essential place in world affairs today. Neier combines analysis with personal experience, and gives a unique insider's perspective on the movement's goals, the disputes about its mission, and its rise to international importance. Discussing the movement's origins, Neier looks at the dissenters who fought for religious freedoms in seventeenth-century England and the abolitionists who opposed slavery before the Civil War era. He pays special attention to the period from the 1970s onward, and he describes the growth of the human rights movement after the Helsinki Accords, the roles played by American presidential administrations, and the astonishing Arab revolutions of 2011. Neier argues that the contemporary human rights movement was, to a large extent, an outgrowth of the Cold War, and he demonstrates how it became the driving influence in international law, institutions, and rights. Throughout, Neier highlights key figures, controversies, and organizations, including Amnesty International and Human Rights Watch, and he considers the challenges to come. Illuminating and insightful, *The International Human Rights Movement* is a remarkable account of a significant world movement, told by a key figure in its evolution. Henri Bergson was a great French philosopher whose life overlapped that of Charles Darwin. He had serious concerns about Darwin's atheistic concept of man and animals evolution. Bergson also presented ideas of Intelligent Design almost 200 years prior to its regeneration in the 20th century. My book separates God from Evolution of the cosmos and all it contains by espousing the "elan vitale" as "of God" and the true creator of the Universe.
