Working up a 'case' for presentation to the examiner is an integral part of clinical learning. Case presentations give opportunity for applying the knowledge of diseases and the clinical skills for evaluation and management of a patient. This practical application (of theory and clinical skills) is tested in practical examination in clinical subjects like paediatrics. This book helps enabling the logical application of theoretical knowledge and clinical skills in real life situations. This book contains details of several real cases, which are common in this part of the world. Each case provides description in a standard format and answers to the questions commonly asked at various stages of case presentation. Important points for communication with parents/patients are given in every case, which will help in developing communication and counseling skills related to a particular disease or condition. It prepares the reader for other components of practical examination in paediatrics, including x-rays, instruments, laboratory reports, and drugs. Annexure includes almost all charts required for clinical workup of a paediatric patient. Very special feature are case related videos on various topics, MCQs, whiteboard lectures on clinical approach to common conditions. In addition, this book comes with complimentary access to enhanced e-book.

Surgery May 21 2020 had a dream. My dream was to assemble the current and future leaders in surgery and ask them to develop an evidence-based surgical textbook that would provide the reader with the most up-to-date and relevant information on which to base decisions in modern surgical practice. In other words, the dream was to create the best, most comprehensive textbook of surgery. Fortunately, I met Laura Gillan of Springer-Verlag New York, who had a similar dream. As our editor, she has provided the foundation and structure for this dream. She has made this dream a reality. Because surgery is a highly specialized and diverse discipline with significant complexity, I also needed a commitment from outstanding surgeons to serve as coeditors. I was fortunate to have a diverse group of exceptional, young-in-spirit, energetic, cutting-edge, surgical investigators share in this project, and I wish to thank them for their invaluable contribution to this undertaking. The Editorial Board, including Randy Bollinger, Fred Chang, Steve Lowry, Sean Mulvihill, Harvey Pass, and Robert Thompson, met for the first time at the American College of Surgeons meeting in Chicago in October 1997 (Fig. 1). There, this book was conceived. Each of us developed the plan and content for his specific surgical discipline. The common thread is that all decisions and recommendations are based on the best available evidence and that the reader can clearly see the evidence in our "E-tables" (evidence-based tables) specifically marked for the reader's reference.
